

## **Olive the World Project Scope**

### **Project Objective:**

Create a fun and engaging game focused on an olive traveling the world and becoming a chef. Our objective is to code at least three different minigames and package it into one game system. The games showcase the cuisine from different countries, including the Philippines, Italy, and Mexico. Each game will be modelled after an existing popular game. The Philippines themed game will be modeled after Crossy Road, Italy after Pipe Mania, and Mexico will be modeled after Whack-a-Mole. This game will be free and public to use. This project will help open minds to diverse cuisine from around the world.

### **Deliverables:**

A fully playable web-based game. The progress of this project will be tracked via progress reports, biweekly presentations, midterm and final reports, and a final poster (?)

### **Milestones:**

#### **Week 1-2:**

- Get more acquainted with JavaScript/Phaser, HTML, and GitHub
- Get Virtual Machine to work
- Research similar games/mechanics
- Create GitHub repository/set up README.md file

#### **Weeks 3-7:**

- Develop core framework for our separate games (Zach: Italy, Ella: Philippines, Sabrina: Mexico)
  - Use placeholders for sprites, background, etc
- Basic player controls, win/lose conditions
- Add basic currency earning logic (no shop yet)
  - Collect coins throughout the level, earn more upon completion
  - On-screen currency counter

#### **Weeks 8-10:**

- Create cohesive graphics/visuals for sprites, background, user interface
- Implement main game selection hub/world map with smooth transitions
- Add difficulty levels
- Design and prototype the shop system (Shop UI layout, unlockable cosmetic items based on region, etc)
  - Ensure cosmetic items appear correctly in game scenes
- Playtest games
- Replace placeholders with finalized art

- Evaluate remaining workload, decide if the extra games are feasible

**Weeks 11-13:**

- Develop opening sequence (introduction & tutorial) and closing sequence (ending, credits, final message)
- Add intergame cutscenes
- Add basic sound effects/background music
- Bug fixes/performance issues

**Weeks 14-16:**

- Set up game through GitHub pages
- Code cleanup and documentation

**Week 17:**

- Finish README.md file
- Final polish on animations, sound, and UI

**In scope:**

- Home screen and map selection
- At least three working minigames
- Cut scenes between games
- Consistent aesthetics and graphics throughout all scenes
- Item shop to customize characters

**Reach goal:**

- Adding custom sound effects/music
- Additional levels/achievements/easter eggs

**Out of scope:**

- Multiplayer/friending network
- Computer opponents
- IOS/Android app
- Save files/progress saved in different sessions
